

Connectorized Inside Telephone Type CM

Specifications

Connectorized cables save installation time by minimizing on-the-job terminating and cable splicing. Pre-tested, factory-assembled connectorized cables also minimize installation terminating and splicing mistakes.

Configuration

25-pair plugs (P = male) and/or 25-pair connectors (C = female) on *one or both ends*. On 50-pair and larger cables, the cable ends are divided into 25-pair sub-units, to which the 25-pair plugs/connectors are applied.

Standard connectorized cable sizes

- 6-pair
- 12-pair
- 25-pair
- 50-pair
- 75-pair
- 100-pair
- 200-pair
